

DESCRIPTION

The CD19 scFv-CD28-4-1BB and CD19 scFv-CD28 with deleted CD3 ζ control CAR-T cells are available at 1x10⁷-1x10⁹ cells in frozen vials, and shipped on dry-ice. The Control Delta CD3 ζ CAR-T cells were cryopreserved in the next-generation cryopreservation CS10 CryoStor medium (*Sigma Aldrich*, Catalog Number: C2874. CryoStor is a registered trademark of BioLife Solutions, Inc.).

STORAGE TEMPERATURE

Liquid nitrogen vapor phase for frozen vial (130°C).

PROTOCOL

1. Thaw Control CAR-T cell samples quickly in a 37 °C water bath until all visible ice has melted. Thaw time for a 1 ml sample in a cryovial is 2-3 minutes. Cryovials should be cool to the touch when removed from the water bath.
2. Dilute cell/CryoStor mixture immediately with CAR-T cell culture medium. This can be performed in a single step. The dilution medium should be between 20–37 °C. A dilution ratio of 1:10 (sample:medium) or greater is recommended.
3. Plate cells appropriately according to the experimental conditions of assays.
4. Culture the control lentivirus CAR-T cells or use immediately

Note: T cells that are used immediately after thawing have the highest level of viability.

DELIVERABLES

Available Cell Numbers	Price	Catalog Number
1x10 ⁶ cells	\$800	PM-CAR1004-1M PM-CAR1009-1M
1x10 ⁹ cells	Please inquire	PM-CAR1004-1000M PM-CAR1009-1000M

DATA
