

Products and Services

- Mouse Monoclonal Antibody
- Rat Monoclonal Antibody
- Human Antibody
- Hybridoma Sequencing
- Polyclonal Antibody

Promab Biotechnologies' CAR-T new product development programs are being designed for pre-clinical and future clinical applications.

CAR-T cells can be used for:

1. Compound screening
2. Antibody screening
3. Co-stimulatory and activation domain comparison
4. Personalized medicine and donor variations for CAR-T screening
5. Checkpoint inhibitors
6. Safety switches and regulators of CAR-T functions
7. Pre-clinical in vivo models
8. Treg and T memory cells in CAR-T setting
9. CAR-T signaling, tumor microenvironment
10. Proof of concept studies for clinical trials

The structure of CAR from Promab:

CD20 protein is overexpressed in B-cell leukemia, lymphoma. CD20-CAR-T cells can be used to target CD20 antigen.

Figure 1. CAR-T cells expressing the above constructs are available from ProMab targeting CD20 antigens. ScFv means single chain variable fragment. These CAR-T cells are generated with CD20 CAR construct.

To date, ProMab has generated 2nd generation CAR and CAR controls (as shown in Figure 1). ProMab has also generated CAR-T cells and CAR-NK (Natural Killer) effector cells against cancer target cells that show excellent functionality, including dose-dependent and target cell-specific cytotoxic activity.

These CAR-T cells can be tested with target cells in cytotoxic assays and used for testing modulators of immune checkpoint inhibitors (PD-1, CTLA-4 pathways), activators of immune response, or small molecules affecting T-cell or T-reg activity.

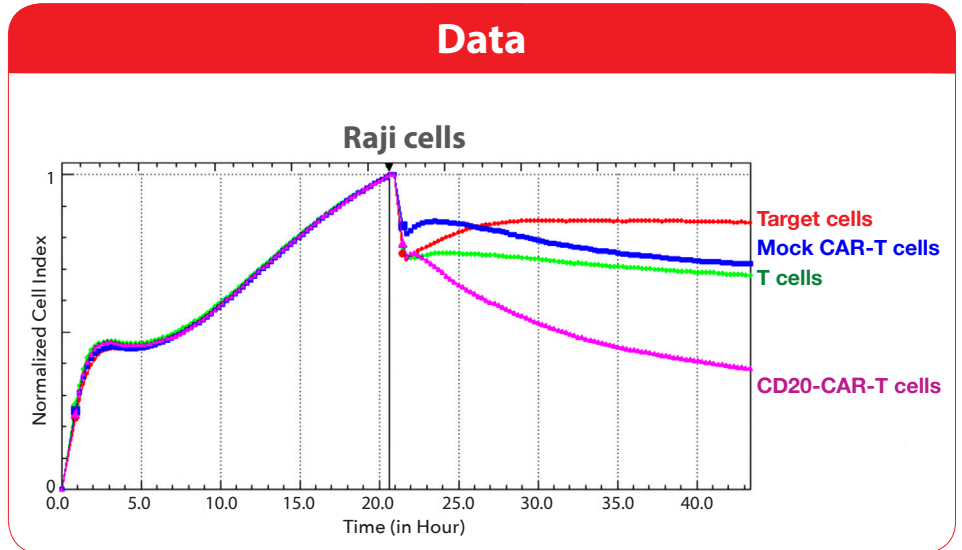

Figure 2. CD20 CAR-T cells are cytotoxic against Raji cells. RTCA cytotoxicity assay is shown.

Figure 3. CD20-CAR-T cells secrete IFN-gamma against Raji cells. The secretion of IFN-gamma is comparable to CD19-CAR-T cells (shown).
