

SKOV-3 is an ovarian cancer cell line. The cell line was transduced with GFP-luciferase lentivirus, making this target cell line positive for GFP⁺ and Luciferase⁺. The cells were checked for expression of GFP by FACS (Figure 1) and sorted for stable expression. The cell line can be used for imaging in mice.

Data

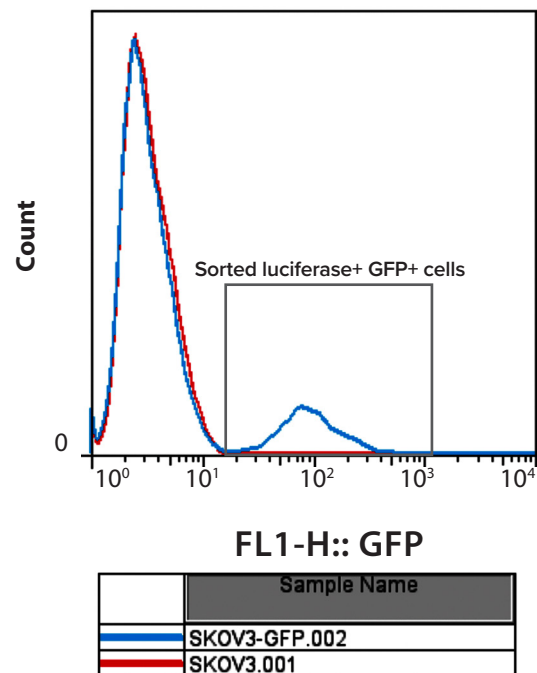

Figure 1. Expression of GFP in SKOV-3-GFP⁺-Luciferase⁺ cell line.
